

5 | INFRASTRUCTURE POLICIES AND PROCEDURES: AT&T

Principal observations and takeaways

- Over the full 2010-2017 period, less than 1% of all AT&T capital spending on network plant additions, just under \$47-million, was for outside plant rehabilitation projects.
- Extraordinarily small portions of AT&T California's Plant Additions and Maintenance expenditures have been directed at legacy POTS services over the 2013-2017 period.
- Despite the clear service quality objectives as set out at GO 133-C/D, the only areas where AT&T California has maintained POTS service quality in its network were in those wire centers where the company has invested in revenue-driven advanced broadband services.

Introduction

AT&T California has provided a number of internal “Practices” documents that describe the company’s objective policies and procedures. This material covers a variety of infrastructure maintenance and construction/enhancement activities including, among other things, long range outside plant (“OSP”) planning, feeder and distribution plant design and administration, distribution area (“DA”) design and planning, subscriber line carrier planning and deployment, routine inspections, and disaster recovery. In this chapter, we review and summarize the practices and policies described in these documents. It must be emphasized that these “official” enumerations of AT&T policies and practices mainly apply across all AT&T ILEC operating territories nationwide. As a result, they provide only *normative* and general descriptions of objective practices, priorities and performance, and thus may not apply specifically to AT&T California.

It is also important to understand that the various policies and practices described in these materials deal generally with all services that are furnished using the common OSP infrastructure. These include legacy circuit-switched POTS voice services, but also include a variety of (nonregulated) broadband services that appear to be the principal driver for the vast majority of OSP capital investment. While POTS customers located in areas where such network upgrades have occurred may benefit in terms of improved service quality, such gains appear to be ancillary to the primary driver of the capital investment upgrades.

The scope of ETI’s undertaking with respect to this study does not include any on-site physical inspections of the two ILECs’ plant. Accordingly, our assessments as to the relative effectiveness of the nominal AT&T practices in bringing service quality for POTS services to the levels contemplated in GO-133-C/D over the study period are largely based upon operations and financial data that are analyzed in detail in Chapters 6 and 7, respectively. At the outset here, however, it is instructive to begin this discussion by examining the relative portion of AT&T California’s total operating expenses and capital outlays that the Company has identified as POTS-related. As it turns out, POTS maintenance and plant investments each represent extremely small fractions of AT&T California’s total infrastructure-related outlays.

Network operation, maintenance and construction

Ongoing operation, maintenance, planning and construction of AT&T California local network infrastructure falls within the scope of the AT&T Technology and Operations Organization.⁹⁸ As summarized by AT&T:

98. AT&T Response to DR-01A, Request 1.

The following departments in the AT&T Technology and Operations organization support legacy voice services which are subject to the California Public Utilities Commission's General Order 133-D service quality metrics and reporting obligations:

Field Operations

Technical Field Services ("TFS") West (Core) is responsible for the installation and repair of Legacy and IP voice and broadband data services (from central offices, through outside cable plant, terminals, and to the customer premises), as well as network infrastructure support and maintenance of those same central office and outside cable plant network facilities.

Dispatch Optimization Center is responsible for the forecasting / prioritization / and dispatching of installation and repair Legacy, IP, and broadband data services (inclusive of central office and field dispatch), as well setting customer appointment intervals.

Construction & Engineering

Outside Plant Engineering (Feeder, Distribution) is made up of experienced and skilled personnel who design the appropriate electronics, structures (e.g., conduit or poles), and copper or fiber cables in order to provide services, including POTS, to customers in AT&T's service territory. In the event of large damages, such as wild fires and 3rd party damages, Outside Plant Engineering will design replacement or reinforcement facilities and structures. These designs are sent to Outside Plant Construction for deployment.

Outside Plant Construction (Line, Splice for Copper and Fiber) uses specialized skills and equipment to construct new structures (primarily conduit and poles), and place electronics and copper or fiber cables in order to provide services to AT&T customers. During major outages or periods of excessive troubles, such as wild fires or significant storms, Outside Plant Construction will loan qualified technicians in support of AT&T's Outside Plant Maintenance and Repair and Installation and Repair groups.⁹⁹

As a general rule, projects undertaken by the Technical Field Services organization are relatively small, generally in the \$5,000 to \$10,000 range, and are considered as Maintenance Expenses

99. *Id.*, emphasis in original.

(USOA Accounts 6200-6441) for accounting purposes. Larger projects are assigned to the Construction & Engineering (“C&E”) organization. C&E projects are generally capital projects that are treated as Plant Additions for accounting purposes, and are assigned to the various Telecommunications Plant in Service (“TPIS”) accounts.

Plant maintenance and capital investment

AT&T was requested to “[p]rovide specific data on annual outside plant relief undertakings from 2010-2017” in the form of two spreadsheets, (a), “with financial data for C&E projects investment by wire center,” and (b) “with financial data for TFS expenses by wire center.”¹⁰⁰ In its “Further Response” to DR-04A dated July 10, 2018, AT&T provided a spreadsheet containing “financial information about proactive rehabilitation projects” for both C&E and TFS, but noted that “[f]inancial data for TFS projects is only available from 2013 and forward.”¹⁰¹

Over the full 2010-2017 eight-year period, the C&E OSP Rehabilitation Projects identified by AT&T involved plant additions totaling just under \$47-million.¹⁰² However, total AT&T California Gross Plant Additions (covering all TPIS categories) over that same period amounted to \$10.16-billion.¹⁰³ Thus, taken together over the full eight-year study period, AT&T California devoted only 0.46% of its network capital investments to POTS-related outside plant. Table 5.1 below provides this data on an annual basis:

Over the full 2010-2017 period, less than 1% of all AT&T capital spending on network plant additions, just under \$47-million, was for outside plant rehabilitation projects.

100. DR-04A, Request 3.

101. AT&T Further Response to DR-04A, dated July 10, 2018, Request 3.

Source: AT&T CA Further Response to DR-04A; AT&T CA ARMIS Forms 43-02 for 2010-2017, as filed with the CPUC.

Even if this comparison were limited to only the portion of Gross TPIS Additions that are associated with outside plant – these are designated as “Cable and Wire Facilities” on the ARMIS Forms 43-02 – the amounts identified by AT&T California as being spent on “outside plant rehabilitation” are still a minuscule fraction of total outside plant additions, as shown on Table 5.2 below:

Table 5.2

Source: AT&T CA Further Response to DR-04A; AT&T CA ARMIS Forms 43-02 for 2010-2017, as filed with the CPUC.

In an attempt to gain an understanding of the nature and extent of infrastructure investment over the full 2010-2017 study period, ETI drafted several data requests to AT&T California seeking various investment and maintenance expense data by Uniform System of Accounts (“USOA”) account and by wire center. These included the follow specific request:

DR-03A, Request 1: Please provide the dollar amount of Gross Plant Additions as recorded on each of the following 47 CFR Part 32 Uniform System of Accounts (“USOA”) Telecommunications Plant in Service (“TPIS”) accounts separately for each central office

building and its associated wire center serving area for the period June 30, 2010 through December 31, 2017, in six-month intervals ...

Included within this request were data for eight outside plant (“Wire and Cable”) accounts:

- Account 2411: Poles
- Account 2421: Aerial cable
- Account 2422: Underground cable
- Account 2423: Buried cable
- Account 2424: Submarine & deep sea cable
- Account 2426: Intra-building network cable
- Account 2431: Aerial wire
- Account 2441: Conduit systems

AT&T provided a spreadsheet in response to this request on May 17, 2018 and advised that “AT&T California (‘AT&T’) provides in the spreadsheet named “Attachment 1_Data Request Number 03-A” the dollar amount of gross plant additions as recorded for the 47 CFR Part 32 Uniform System of Accounts (“USOA”) Telecommunications Plant in Service (“TPIS”) accounts for each central office building and associated wire center service area.” On August 6, 2018, AT&T provided a “Corrected” response to several of the original responses to DR-03A. With respect to Request 1, dealing with Gross Plant Additions, AT&T offered the following explanation for this “correction:”

In the course of investigating the differences in CLLI codes provided in response to DR 01-A, Attachment 1 and the original response provided to this DR (DR 03-A, Attachment 1), it was discovered that some of the information provided in the latter was in error, and should be replaced. ... The number of CLLI codes provided in this Corrected response may not exactly match those provided in response to DR 01-A,

That explanation notwithstanding, the “corrected” response provided material – and entirely unexplained–revisions to the original spreadsheet. Table 5.3 below summarizes the principal changes in aggregate Gross Plant Additions figures:

Table 5.3			
AT&T CALIFORNIA TOTAL 2010-2017 GROSS PLANT ADDITIONS FROM VARIOUS DATA SOURCES			
	Gross Plant Additions per AT&T May 17 DR-03A Response	Gross Plant Additions per AT&T August 6 DR-03A "Corrected" Response	Gross Plant Additions per Forms 43-02
All Plant Accounts	11,739,053,969	8,947,340,053	10,158,164,000
All OSP Accounts	3,850,934,047	52,055,334	3,921,310,000
Source: AT&T CA Further Response to DR-04A; AT&T CA ARMIS Forms 43-02 for 2010-2017, as filed with the CPUC.			

The figures contained in the original (May 17) response are relatively close, in aggregate, to the data provided by AT&T California to the CPUC in its annual Form 43-02 filings. However, the "corrected" response is not even close to the Form 43-02 submissions, making it impossible to identify which (if any) of the three sets of figures is actually correct. Table 5.4 below contains the year-by-year total gross plant additions for each of these eight OSP accounts as provided in AT&T's May 17 and August 6, 2018 responses, together with the corresponding Form 43-02 figures:

Table 5.4									
AT&T CALIFORNIA GROSS ANNUAL OUTSIDE PLANT ADDITIONS 2010-2017 (\$000)									
	2010	2011	2012	2013	2014	2015	2016	2017	Total

Source: AT&T Response to DR-03A, as corrected 8/6/18; AT&T CA ARMIS Forms 43-02 for 2010-2017, as filed with the CPUC;				

AT&T also provided data on maintenance costs incurred by TFS for OSP rehabilitation projects but only for five years – 2013 through 2017. According to AT&T, aggregate TFS spending on OSP rehabilitation over the five-year period was \$30.9-million.¹⁰⁴ However, over

104. *Op. cit.*, fn 5.

that same five-year period, total AT&T California maintenance expenses for outside plant (Accounts 6411 through 6441, aggregated to Account 6410) totaled \$3.57-billion.¹⁰⁵ The TFS Rehabilitation projects that AT&T has described as POTS-related thus amounted to only 0.86% of total outside plant maintenance costs over the 2013-17 period. Table 5.6 below summarizes these amounts for the five years for which AT&T has made TFS expense data available:

	2013	2014	2015	2016	2017	Total
TFS. OSP Rehab Maintenance Projects	5,060	3,147	2,576	13,821	6,281	30,894
Total Account 6410 Cable & Wire Maintenance Expense	678,737	790,714	746,968	673,524	683,751	3,573,694
C&E OSP Rehab as pct of Gross Add'ns	0.75%	0.40%	0.34%	2.05%	0.92%	0.86%

Source: AT&T CA Further Response to DR-04A; AT&T CA ARMIS Forms 43-03 for 2013-2017, as filed with the CPUC.

A correspondingly minuscule portion of total AT&T California maintenance expenses over the 2010-2017 period were directed toward outside plant rehabilitation.

Recognizing that POTS-related plant additions and maintenance represent little more than a *de minimis* fraction of total AT&T California capital and maintenance spending, it is instructive to look at how these funds are being directed. ARMIS Forms 43-02 and 43-03 provide this information at the USOA Account level for AT&T California companywide. In addition, AT&T California provided this data at the individual wire center level.¹⁰⁶ In aggregate over the entire AT&T California entity, the wire center data for the entire company should, in principle, equal the gross additions and maintenance expenses as reported on ARMIS Forms 43-02 and 43-03, respectively. As shown on Tables 5.2 through 5.6, however, this is not the case. ETI requested that AT&T provide either an explanation for the discrepancies or a reconciliation of the two data sources.¹⁰⁷ However, AT&T did not respond to this request.

105. AT&T CA ARMIS Forms 43-03 for 2010-2017, as filed with the CPUC;

106. AT&T CA Response to DR-03A.

107. DR 04-A Supplementary Request dated September 26, 2018.

The persistent redirection of AT&T California capital resources away from legacy circuit-switched services and over to (nonregulated) broadband can also be seen by comparing the relative mix of telecommunications plant in service (TPIS) as of January 1, 2010 against the cumulative gross plant additions that AT&T California made over the full eight-year 2010-2017 period. Table 5.7 below summarizes this both in dollars and in percentages of total TPIS for each of the major plant categories:

Acct	Account name	TPIS as of 1/1/10	Pct of total TPIS	Gross Additions 2010-17	Pct of Total Gross Adds
2001	Telecommunications Plant In Service (TPIS)	38,012,545	100%	10,158,164	100%
2110	Land and Support Assets	4,401,971	11.60%	974,346	9.73%
2211	Non-digital switching	0	0%	214	
2212.1	Digital switching--Circuit	5,192,369	13.68%	148,894	1.49%
2212.2	Digital switching--Packet	501,701	1.32%	1,335,116	13.34%
2220	Operator systems	22,064	0.06%	1	0.00%
2231	Radio systems	146,498	0.39%	29,549	0.30%
2232.1	Circuit equipment--electronic & electronic-optical	9,102,360	23.98%	2,695,654	26.93%
2232.2	Circuit Equipment--optical-optical	0	0.00%	1,024	0.01%
2310	Information Origination/Termination	1,319,289	3.48%	902,795	9.02%
2411	Poles	889,619	2.34%	493,031	4.92%
2421	Aerial cable	3,269,093	8.61%	840,574	8.40%
2422	Underground cable	6,445,615	16.98%	1,552,375	15.51%
2423	Buried cable	3,044,173	8.02%	364,234	3.64%
2424	Submarine & deep sea cable	8,426	0.02%	14	0.00%
2426	Intra-building network	4,300	0.01%	17,395	0.17%
2431	Aerial wire	49,055	0.13%	11	0.00%
2441	Conduit systems	3,564,250	9.39%	631,574	6.31%
TOTAL				10,158,164	

Source: AT&T CA ARMIS Forms 43-02 for 2010-2017, as filed with the CPUC.

Nearly 56% of all gross additions made during the 2010-2017 period were in three plant categories – Account 2212.2 Packet Switching, Account 2232.1 Optical/Electronic Circuit Equipment, and Account 2422 Underground Cable. Virtually all new central office investments from 2010 forward have been directed at acquiring increased packet switching capacity. Account 2232, which accounted for more than a quarter of all gross plant additions, includes two

categories of Circuit Equipment – Electronic (2232.1) and Optical (2232.2). However, “Circuit equipment that converts electronic signals to optical signals or optical signals to electronic signals shall be categorized as electronic” – i.e., shall be carried in Account 2232.1.¹⁰⁸ While it is not possible from the raw accounting data to identify “electronic” vs. “electronic/optical” circuit equipment, it is highly likely that the overwhelming majority of newly purchased Account 2232.1 Circuit Equipment is of the type that “converts electronic signals to optical signals or optical signals to electronic signals.”

Extraordinarily small portions of AT&T California’s Plant Additions and Maintenance expenditures were directed at legacy POTS services over 2013-2017 period.

It is also instructive to examine the pattern of gross additions at the individual wire center level. Tables 5.8 and 5.9 summarize the total company Gross Plant Additions and Annual Maintenance Expenses for TPIS-related network assets for the 2010-2017 period as reported in Forms 43-02 and 43-03, respectively. Table 5.10 provides the 50 wire centers with the largest total gross additions for the 2013-2017 period, and Table 5.11 provides the 50 wire centers with the largest amounts of Cable & Wire maintenance expenses for the same 2013-2017 period. Notably, only five (5) wire centers appear on both lists. Clearly, wire centers that have benefitted from large capital outlays do not require the level of maintenance costs that AT&T has incurred for locations that have not seen major physical upgrades.

108. 47 CFR § 32.2232(d).

Summary and conclusions

AT&T California's pattern of devoting little more than a *de minimis* share of its capital investment and operating expense resources to address deteriorating POTS outside plant is an area of major concern for the CPUC. In Chapter 4A, we examined in detail the long-term deterioration in most service quality metrics and, in particular, in AT&T's responses to out-of-service conditions. The data confirm that, for the most part, service quality and responses to out-of-service trouble conditions have declined over the 2010-2017 period. The exception to this can be found in wire centers that have received plant upgrades that support U-verse branded VoIP, Internet access, and video (IPTV) services.

Despite the clear service quality objectives as set out at GO 133-C/D, the only areas where AT&T California has maintained POTS service quality in its network were in those wire centers where the company has invested in revenue-driven advanced broadband services.

Thus, and despite the clear service quality objectives as set out at GO 133-C/D, the only situations in which POTS service quality has been maintained at roughly the same level over the full 8-year study period is to be found where revenue-driven investments in advanced services have been undertaken. The potential revenue gains from such initiatives clearly offer a stronger incentive for capital investment than the threat of fines or other regulatory measures that might be adopted in response to persistent substandard POTS service quality.
